

Preliminary DATASHEET

DMV3N3R0V704M2DTA0

3V, -20°C to +85°C

Preliminary V1.2, Mar 2023

Note: Specification may change without notice

Applications:

- Unique ultra-thin prismatic design replaces bulky 3V cylindrical EDLC in space constrained application.
- Provide high pulse power in application designed to use 3V primary battery.
- Battery-less low power application, at 3V 23% more energy is available than the same capacitance at 2.7V.
- Asset tracking.
- Energy Harvesting for remote sensors.
- RTC and memory backup power.
